Description:	<p>Since the Arms Trade Treaty (ATT) took effect, various measures have been discussed to prevent the diversion of conventional arms.</p> <p>However, as measures discussed so far are mainly policy level attempts that are to prevent illicit trade, we believe that more concrete measures need to be provided.</p> <p>This Side event aims to call attention to the devastating impact that the diversion of conventional arms can bring to humanity, and examine types and examples of the possible diversion of each weapon system by its Life-cycle.</p> <p>In addition, we will discuss more pragmatic measures that take account of “Total Life-Cycle”, and highlight that both exporting and importing countries are responsible for each and every measure.</p>
